Abstract of the Disclosure

When various image data etc. published on a
Web are used in an application of a client, a

5 system of inserting all necessary information into
the application only in a simple operation such as
a dragging-and-dropping operation, etc. is provided.
The utilization of the local disk resources of a
client can be further improved by referring to

10 target information on a Web. In a client connected
to a network such as Internet, etc., the system
includes: a unit for inserting image data into the
application of the client by dragging and dropping
or copying and pasting each type of image data etc.

15 displayed on the Web browser in the client; a unit
for obtaining the URL on which the image data are
published, and the information about the image data,
and managing them as the attribute of the image
data.
